ElecLink Statement Regarding Recent NTC Restrictions

Since the commencement of commercial operations on 25th May 2022 ElecLink's capacity has been restricted by NGEN under the [GB NTC Methodology](#) approved by Ofgem via a [C28 derogation](#).

These restrictions have resulted in a maximum daily capacity offering by ElecLink to the market of 800-900MW in the GB>FR direction.

Throughout this period ElecLink has maintained 100% planned availability and capability to offer 1014MW in both directions.
